

EDITORIAL

Dear readers,

This edition of *Revista Paranaense de Desenvolvimento*, for the first semester of 2024, is composed of a Dossier organized by economist Marina Silva da Cunha, a full professor in the Department of Economics and the Graduate Program in Economic Sciences at the State University of Maringá (UEM). Marina has an PhD from the University of São Paulo with post-doctorate from the University of Brasília. She has produced a wide range of scientific work, with special emphasis on issues related to the labor market, income distribution, poverty and social public policies.

Two articles complete this edition. The first, by Fabiano Prado Pedroso, Marcos Minoru Hasegawa e Maurício Vaz Lobo Bittencourt, analyzes the volume of investments, risk and return of a certain financial asset, listed on the stock exchange, and adapted to the concepts of business management adhering to ESG (Environmental, Social and Governance) criteria. The last, by Claudio de Jesus Oliveira Esteves e Júlio Ramos, addresses the sustainable management of water resources in organic agroecological production in the river basins and sub-basins of the state of Paraná.

Good reading.
